

## Neptunus **TBCVS II** - Tactical Buoyancy Compensator Vest System

A modular system providing buoyancy/flotation and emergency breathing features in one compact and low profile package.

The purpose of the system is to give the maritime operator/diver the capability of operating in water with buoyancy trim/compensation as well as provide him/her with emergency breathing and flotation for emergency situations.

### The basic configuration consist of:

- Maritime load bearing vest (First Spear or NFM)
- Buoyancy compensation bladders in front and back panel
- Inflation/Emergency breathing
  - Cylinder of choice
  - Pressure reduction stage/ gas distributor adapter
  - Hoses of choice
  - Manual inflator for buoyancy adjustment
  - Over pressure valves (option)
  - Breathing regulator w. mouthpiece

### Options/Accessories

- Flotation devices with manual and/or automatic inflation capabilities
- Ballistic plates (PU-coated).

### Made in Sweden

As a competence/equipment provider of Tactical Maritime solutions and tactical diving systems we are capable of modifying the basic configuration to customer needs and operational requirement. As part of the NFM Group and with an extensive partner network we can provide a wide range of ballistic panels and plates and vital performance/capability enhancing accessories.
